

Document Summary TASK-14016C64

Analysis & Generated Response

Certainly! Below is the code snippet for a simple HTML login page:

```
```html<!DOCTYPE html>

<html lang="en">

<head>

<meta charset="UTF-8">

<meta name="viewport" content="width=device-width, initial-scale=1.0">

<title>Login Page</title>

<style>

body {

font-family: Arial, sans-serif;

background-color: #f4f4f4;

display: flex;

justify-content: center;

align-items: center;

height: 100vh;

margin: 0;

}

.login-container {

background-color: white;

padding: 20px;

border-radius: 8px;

box-shadow: 0 4px 6px rgba(0, 0, 0, 0.1);

width: 300px;

}

.login-container h2 {

text-align: center;

margin-bottom: 20px;

}

}
```

```
input[type="text"], input[type="password"] {
width: 100%;
padding: 10px;
margin-bottom: 15px;
border: 1px solid #ccc;
border-radius: 4px;
}
button {
width: 100%;
padding: 10px;
background-color: #007bff;
color: white;
border: none;
border-radius: 4px;
cursor: pointer;
}
</style>
</head>
<body>
<div class="login-container">
<h2>Login Page</h2>
<input type="text" placeholder="Username" required>
<input type="password" placeholder="Password" required>
<button>Login</button>
</div>
</body>
</html>
...
```

This code creates a basic HTML structure with fields for username and password, along with a login button. You can customize the design and functionality as needed.
