

Approval Note TASK-25606317

Analysis & Generated Response

Analysis of Inspection Report:

1. Purpose & Standards:

- The IT Security & Remote Work SOP defines mandatory security measures for 50+ Full-Time Staff operating across hybrid environments.
- Hardware & Password Governance:
 - All corporate laptops must run company-managed Endpoint Detection & Response (EDR) software and keep BitLocker/FileVault disk encryption enabled.
 - Authentication: Passwords are a minimum of 14 characters, stored using corporate password managers. Multi-Factor Authentication (MFA) is mandatory on all accounts (Google Workspace, GitHub, AWS).
- Remote Work & Network Access SOP:
 - Staff connecting from remote locations or public Wi-Fi must route all traffic through the official NexusTech WireGuard VPN.
 - Data Transfer Restrictions: Production datasets and customer Personal Identifiable Information (PII) cannot be downloaded onto personal devices or unencrypted USB drives.

2. Key Findings, Observations, & Potential Safety/Compliance Issues:

- **BitLocker/FileVault Disruption:** All corporate laptops running company-managed EDR software must keep BitLocker/FileVault disk encryption enabled to prevent unauthorized access.
- **Observation:** This is a clear violation of the IT Security & Remote Work SOP. The requirement for BitLocker/FileVault disks should be enforced by all Full-Time Staff.
- **Password Management:** Passwords are minimum 14 characters and stored using corporate password managers, which may not meet legal requirements or best practices.
- **Observation:** This is a violation of the IT Security & Remote Work SOP. The use of corporate passwords for personal accounts should be strictly controlled to prevent unauthorized access.
- **Network Access Restrictions:** Staff connecting from remote locations must route all traffic through NexusTech's official WireGuard VPN, which may not meet legal requirements or best practices.
- **Observation:** This is a violation of the IT Security & Remote Work SOP. The use of non-standard network protocols (e.g., WireGuard) should be strictly controlled to prevent unauthorized access.
- **Data Transfer Restrictions:** Production datasets and customer Personal Identifiable Information (PII) cannot be downloaded onto personal devices or unencrypted USB drives.
- **Observation:** This is a violation of the IT Security & Remote Work SOP. The use of non-standard data transfer protocols should be strictly controlled to prevent unauthorized access.
- **Incident Response:** In case of a lost device or compromised credential, an employee should report to security@nexust
