

Document Summary TASK-A13CF2B0

Analysis & Generated Response

- **Title:** Sovereign AI Workbench for On-Premise Agentic AI
- **Problem Statement ID:** SIH26117
- **Problem:** Confidential data needs to be processed and verified locally.
- **Theme:** Smart Automation
- **PS Category:** Software
- **Team ID:**
- **TEAM ADRESTIA**
- **Team Name:** TEAM ADRESTIA
- **Input:**
 - PDF, Image, Drawing (drawing), Code (code)
 - Local OCR + Vision models
 - Private SOPs and manuals
 - Task-specific local models with tools
 - Sandbox verification of evidence
 - Evidence-based decision-making
- **Detailed Solution:**
 1. **Input:**
 - PDF, Image, Drawing (drawing), Code (code)
 - Local OCR + Vision models
 - Private SOPs and manuals
 - Task-specific local models with tools
 - Sandbox verification of evidence
 2. **Understand:**
 - Local OCR + Vision models for data processing
 - Private SOPs and manuals to guide tasks
 - Task-specific local models ready for use
 3. **Plan:**
 - Agent creates a task plan
 - Local models are selected per task
 - Tools are used to verify evidence
 4. **Execute:**
 - Local models run on the agent's device
 - Evidence is verified and tools are updated accordingly

- **Verification/Reordering:**

- The sandbox environment ensures that all necessary steps have been taken.
- Evidence-based decision-making supports a more accurate output.

- **Delivery:**

- Word, Excel, PPT, Code, Text (code generation)
- Local models selected per task
- Tools used to verify evidence

- **Output Format:**

- PDF, Image, Drawing (drawing), Code (code)

- **Team Description:**

- TEAM ADRESTIA: An on-premise industrial AI assistant team focused on developing a sovereign AI workbench using open-weight multimodal LLMs for confidential industrial work.

- **Technical Approach:**

- The solution combines proven open technologies into one sovereign, multimodal and agentic workflow.
- It uses local OCR + Vision models to process data locally, while private SOPs and manuals guide tasks. Task-specific local models are ready for use with tools like sandbox verification of
