

IT Security & Remote Work SOP

DOCUMENT REF:	EFFECTIVE DATE:	TARGET SCOPE:	APPROVED BY:
NTS-SOP - Security-2026-v1	Oct 1, 2026	50+ Full-Time Staff	HR & Legal Board

1. Purpose & Standards

With 50 team members operating across hybrid environments, securing company hardware, intellectual property (IP), and client data is critical. This SOP defines mandatory security measures.

2. Hardware & Password Governance

- **Workstations:** All corporate laptops must run company-managed Endpoint Detection & Response (EDR) software and keep BitLocker/FileVault disk encryption enabled.
- **Authentication:** Passwords must be a minimum of 14 characters and stored using corporate password managers. Multi-Factor Authentication (MFA) is strictly mandatory on all accounts (Google Workspace, GitHub, AWS).

3. Remote Work & Network Access SOP

1. **VPN Requirement:** Staff connecting from remote locations or public Wi-Fi must route all traffic through the official NexusTech WireGuard VPN.
2. **Data Transfer Restrictions:** Production datasets and customer Personal Identifiable Information (PII) must never be downloaded onto personal devices or unencrypted USB drives.
3. **Incident Response SOP:** In the event of a lost device or compromised credential, the employee must report to security@nexustech.com within 30 minutes.

Security Audits: Quarterly automated compliance scans are performed. Non-compliant devices will automatically lose network access.
